

SUITABILITY

Cable insulation \varnothing
 ≤ 135 mm

DIMENSIONS

Length: 355 mm
Width: 205 mm
Height: 140 mm
Weight: 1,130 kg

DRILL

Socket $\varnothing \geq 10$ mm
1700–3500 rpm/ min

Includes plastic case

USER MANUAL

Vicera CST L for sanding and polishing XLPE and rubber insulated HV and MV cables

Vicera's CST-sanding machine is designed especially for cross-linked polyethylene (XLPE) and rubber insulation sanding and polishing. It can be used to smooth the transition of the insulation and semiconducting insulation screen as well (for the final insulation surface use always clean sanding belt). CST L can also be used for sanding other materials, such as metal pipes.

With CST sanding machine you can deliver the job 10 times faster than by hands with better surface smoothness. Tool is completely safe and less physically demanding when used in appropriate way.

CST sanding machine has 10 mm attachment shaft for the electric drills adjustable socket.

Sanding belts also available from Vicera. Belts are especially suitable for sanding MV and HV voltage cables with highest quality.
